

The Secontroller 15

The Powerful Little Wooden Box

*Economical card access
and revenue controls*

The basic Secontroller 15 is a versatile card access, alarm monitoring and parking revenue control system that can be enhanced with PC Admin for a personal computer interface, and DataView software for hand-off of all transaction data to a relational database for powerful, single screen query building and reporting.

For Parking Revenue Applications

Programmable rates and machine-readable technology, combined with a hard copy audit trail of every transaction, make the Secontroller 15 the best value-based controller in the industry today. Anti-passback is included with every system and a range of optional features can be added to your Secontroller 15 on your initial order or at a later date.

For Security Access Applications

As a security access system the Secontroller 15 can handle up to 14 card readers and is expandable from the standard 500 card capacity up to 2500

cards. Complete elevator controls include individual floor selection and lock-out by time zone. Floors can be individually programmed to operate in secure mode at different times. A standard system can monitor up to 48 alarm points and is expandable to 80 alarm points.

Perhaps the most notable feature of the Secontroller 15 is the 'linking' capability. Linking permits the user to quickly replace lost or stolen access cards without assistance from the factory or dealer. A new card can be read and re-issued to the same user number, replacing the old card information and eliminating the need to purchase more system capacity than necessary.

All system functions including card status, time zones, and area groups are stored in permanent memory and never lost in the event of a power failure. The system includes a continuous form printer that logs all system activity as it occurs.

Parking Revenue Shift Report:

The 'cashier dump' or end of shift report from a machine readable Secontroller 15 system provides extensive information. From the top of the report where the total revenue, cashier number, time of day and the next sequence number are listed, the report lists the amount of cash collected, the number of unpaid tickets and any credit card transactions. Free exits are categorized by validations and grace periods. The number of cancelled transactions, bar code tickets processed, random number tickets processed (a back-up feature for automatically calculated rates) and manually processed tickets are broken out for quick audit. The number of receipts by increment and sub-totals as well as a summary of past activity complete the shift report.

Secom International builds, installs and services on-line, real time parking access and revenue control systems for clients worldwide. Unlike other parking revenue control companies, Secom's rigorous controls begin at Level Four and only get tougher. Secom offers machine readable ticket dispensers and fee calculating terminals, automated pay stations, express exits, automatic vehicle identification (AVI), access cards and readers, on-line validation systems, interactive lot capacity displays, with over 100 custom software choices, and PC driven DataView[™] custom query and report generator. Integrated security controls, point-of-sale and access controls are also available. Contact Secom International to find-out how we can help you collect more of your parking revenue and consistently lower your overall costs of operations.
