

Secom

MULTISPACE PAYMENT STATION

Secom's family of Pay and Display and Pay by Space machines were designed for ease of operation. For *Pay and Display*, the parker simply inserts their money, pushes the button and receives the coupon. Quick and easy. For *Pay by Space*, the buttons are extra large so they can be pressed by a gloved hand. Great for those snowy winters, and perfect for any environment. For *Pay by Space with License Number*, the customer keys in the stall number and the vehicle's license number, preventing abuse by the parker as well as the towing company.

Features

- **Stand Alone Operation** - Just supply power. Solar is an additional option.
- **Display** - Each model has an easy to read LCD display that doesn't fade in bright sunlight. Full instructions on use are given as the patron steps through the process.
- **Money** - The machines have the finest field programmable coin acceptor available. The bill acceptor comes standard with a stacker and the vault is of the highest security.
- **Printer** - The thermal printer can be programmed with any message you wish. The violation time is printed in large easy to read numerals to aid in checking and enforcement.
- **Heater** - An integral heater is standard.
- **Stainless Steel Construction** - These machines cannot rust or corrode. Secom builds its products to last.

Optional Features:

- **Networked/On-line Operation** - These machines can be networked and placed on-line back to a central processor where all data about the machine, including amount of money in the machine and if there are any problems with the machine can be printed out. It also can interface with Secom's Windows based Dataview software program.
- **Credit/debit card reader** - Yes, the units can accept standard bank debit and credit cards as well as monthly cards so the owner can issue monthly passes that activate the machine and issue a ticket (or reserve a space) for a predetermined period.
- **Coin Changer** - Just say the word. Change in one or two coins is available.
- **License plate entry** - The customer is required to enter the vehicle license number which is printed on the receipt.

The Pay and Display (MSP-01-PAD) unit is the machine for this marketplace. Secom took years of experience in parking controls and interactive devices and created the perfect product for Pay and Display. It's available in pedestrian or vehicle accessible models.

The Pay by Space (MSP-01-PBS) machine mirrors its Pay and Display cousin in size and features, but allows users to simply enter a space number, deposit their payment, and be on their way. No need to return to their vehicle to place the coupon on the dash. Plus, the enforcement staff simply goes to the machine and receives a printout of those spaces that have paid.

Both units can be brought on-line and report to a central processor. They are wired via telephone line or wireless. All data and reports can be printed out with Secom's Dataview, the company's Windows based report package.

The Multispace payment kiosk.

Finally, Pay and Display/Pay by Space has come in from the cold. The optional Multispace payment kiosk is sold as a single unit. The steel kiosk protects patrons from the elements. It's shipped prewired and ready to go.

See Secom Specification Sheet MPS-01 for full equipment specifications on each piece of equipment.
